

# Hill Head Opportunities and Constraints

## Environmental:

- The foreshore is RAMSAR, Special Protection Area, Site of Special Scientific Interest designated.
- The foreshore is an important site for wading and waterfowl birds and is a key characteristic of the local environment.
- Any scheme would need to ensure there is no overall loss of wildlife habitat.
- Construction works are only permitted between the 1st April and 30th September to avoid bird disturbance.

## Financial:

- Very low priority for central government flood and coastal erosion grant in aid.
- Funding is likely to come from Fareham Borough Council.
- Potential for other contributions for extra improvements to the project.

## Public Access:

- The promenade is very popular. The safe re-routing of pedestrians will need to be considered during construction.
- Management of Health and Safety and Beach Hut security during construction.
- Construction vehicle access to the site will need particular attention.

## Licenses and Approvals:

The project will need approvals from organisations such as:

- Marine Management Organisation [MMO].
- Fareham Borough Council.
- Crown Estates.
- Natural England.
- Environment Agency.

Working together - protecting our coastline
