

# Welborne

FAREHAM  
BOROUGH COUNCIL

# Transport

*A variety of transportation is required, shared transport such as buses primarily, will be a necessity*

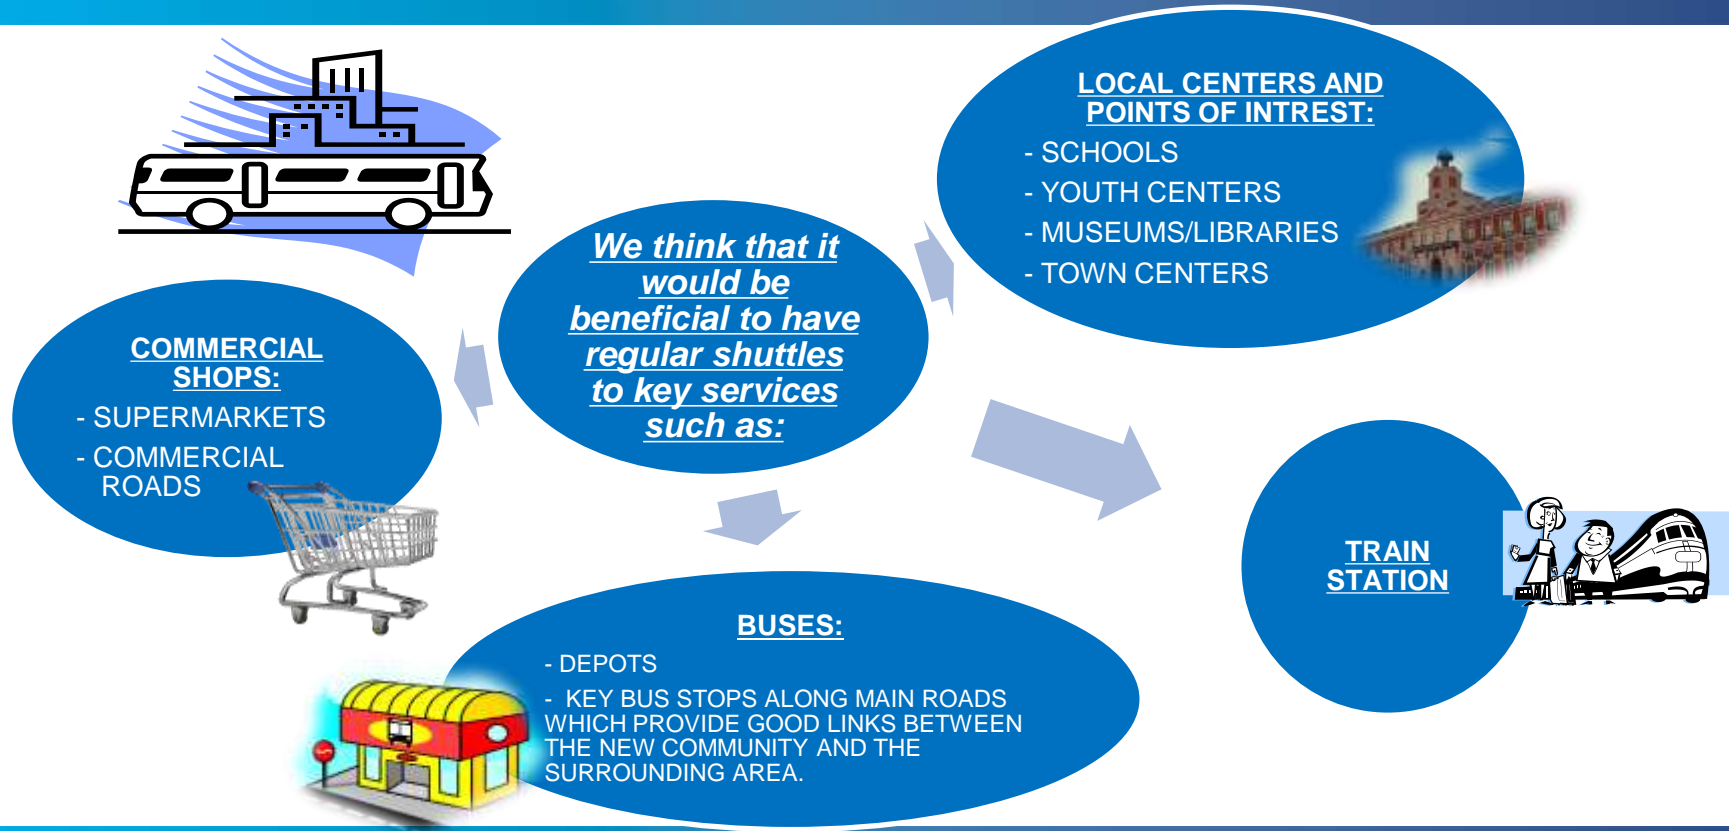

Different modes of mass transport available will make the area more environmentally friendly as less cars with single passengers will be used.

Areas specific for cyclists will persuade the public to use bicycles, also providing "rental bikes" such as the Boris bikes are good schemes to encourage bicycle usage.

Buses running for extended periods of time will make Welbourne an easily accessible area through a majority of the day.

# Transport - Shuttle Links

# Parking

*We feel that  
parking is a  
major issue  
and here are  
some ways to  
improve it:*

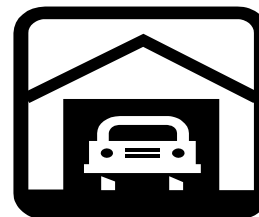

Fine areas, yellow  
lines and clamping  
to deter parking on  
the edges of  
roads.

If possible, more  
houses with  
private parking to  
prevent the roads  
from filling up.

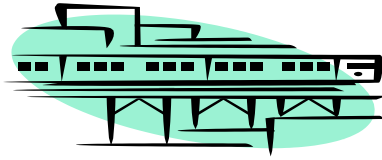

More public  
transport will  
reduce the number  
of car parks  
needed.

Fewer but bigger  
car parks in central  
locations.

# Accessibility

More public transport will make the area more accessible.

*Accessibility is very important in making a successful community, for instance:*

Wider pavements could create space for both pedestrians and cycle paths.

Areas where dropped curbs are regular, such as busy areas, will prevent unnecessary parking and create easier disabled access.

# Accommodation

# Community Facilities

- Schools / Education facilities for all ages
- Community Centre
- GP Surgeries
- Library
- Churches
- Multi use sport pitches
- Outdoor Gym Equipment

# Bins

- It is really important to have separate bins for general waste, recycling, and garden waste, to keep Welborne clean.

During the time it takes you to read this sentence, 50,000 more 12-ounce aluminium cans are made. Let's recycle them.

# Keep it Green

## **Solar Street Lamps**

In some places street lamps have solar panels on top, so they charge all day and they light all night. This will save the cost of electricity and in the long run cut expenses making Welborne a more environmentally sustainable place.

## **Wind farms**

It may be good to have a wind farm near by to power all the homes and buildings, this will avoid energy loss in long cables and save money. This will ensure that Welborne is a better and more sustainable place.

**Thank you for listening**  
to our views and giving the young people of  
Fareham the opportunity to have their  
voices heard.
